▲ “Percent of women aged 18-44 years experiencing intimate partner violence in the past year.”—California
▲ “Rate of family violence incidents involving female victims per 1,000 women in Texas.”—Texas

STATE WOMEN’S HEALTH PROFILES

State Women’s Health Profiles provide each U.S. State and jurisdiction’s women’s health-related priority needs, State performance and outcome measures, and additional women’s health-related data supplied by States in the 2010 Title V 5-year needs assessments.

The profiles provide insight into how Title V agencies are incorporating and tracking women’s health-related needs – particularly women’s health needs outside of pregnancy.

State Women’s Health Profiles can be found online at:

1 Community Health Systems Group, Altarum Institute. Project was funded by the Health Resources and Services Administration, Maternal and Child Health Bureau, Office of Women’s Health.
