Maryland Public Health Dental Hygiene Act
Logic Model (2008-2012)

Goal: To provide all Maryland children with a dental home by increasing oral health prevention and education services to low-income populations and to reduce healthcare disparities for the underserved.

| Public Health Agencies including: | | # of patients who received a-f | **Dentist**
| • Dental facilities owned and operated by | | | **Short-term/Intermediate**: Increased ability of dentists to concentrate on performing treatment (restorative) care
| | | | **Intermediate**: Increased patient load
| | | | **Long-term**: Increase in the # of dentists in the dental health public workforce
| | | | **Dentist**
| | | | **Short-term**: Increased feeling of value among hygienists in public health settings
| | | | **Long-term**: Increase in the # of hygienists working in public health facilities
| | | | **Dental Hygienist**
| | | | **Agency/Community-Wide**
| | | | **Short-term**: Increased awareness of the presence and utilization of public health dental hygienists
| | | | **Short-term**: Increased number of public health settings (e.g., schools, Early/Head Start programs, WIC centers, Judy Centers, long-term care
| | | | **Agency/Community-Wide**

federal, state, or local governments
- Public health departments of schools
- Health facilities licensed by the public health department

Maryland Women, Infants, and Children (WIC) program

Maryland Judy Centers

Maryland Head Start State Collaboration Office

State-licensed Head Start or Early Head Start programs

Maryland Dental Action Coalition

Long-term care institutions

Adult day care centers

from a public health dental hygienist
# of a-f services done by dental hygienists under new law

institutions and adult day care centers) who utilize public health dental hygienists

- **Short-Term:** Increased number of public health facilities utilizing public health dental hygienists
- **Long-term:** Continued increased awareness of HB1280 by the community.

**Assumptions Prior to HB1280:**
1. There is a shortage of dentists that are employed in public health settings
2. Dental hygienists have been underutilized in public health settings in the past.
3. Dental health has a significant impact on the general health and well-being of children. Poor oral health impacts social function and can lead to limitations in communication and social interactions as well as many other problems such as eating and learning. If all Maryland children have a dental home, many of the negative impacts that poor dental health causes would be eliminated.

**External Influences:**
Agencies not taking advantage of the act, oral health campaign, other funding and grants such as a two-year, $250,000 grant from the state of Maryland to provide more than 700 Title I elementary school students in Charles County with dental screenings. Also, other laws passed related to oral health in MD.
