

can youth have tried tobacco and data was collected in 2003, similar and late on by SENDA (CONACE, when studying smoking among (n et al., 2004). Adolescents who smoke and therefore the WHO (11). Unfortunately, despite these. These findings suggest that youth (Darling et al., 2008). In this study access cigarettes. As has been found are still able to buy cigarettes from other sources, such as siblings, (rdson et al., 2008).

is to buy cigarettes from different

perceived difficulties to buy

OUTLET	SMOKE SHOP	MINIMARKET	Total
3.5	3.3	3.13	3.26
3.39	3.14	2.94	2.95
3.55	3.26	2.93	2.87
3.35	2.95	2.97	2.74

informed consent before being of the Department of Psychology
Data Collection and Measurement
 Participants completed a survey included different measures were conducted by under and
Cigarette use was measured from Monday through Friday the final number of cigarettes
Access to cigarettes youth were from different places in the past four items likert scale, from different types of outlets (such as others).

Analysis

We run descriptives, and using analyses were conducted using

RESULTS: ANOVA

We overall found differences (p<0.01) and for the interaction grade level, the less difficulty perceived interaction between outlet and the grade level is greater for smaller
